

An Alternatives Solution for Expanding Income Potential

As yield-constrained markets continue to frustrate income-focused investors, we designed an Alternative Income strategy to enhance and diversify portfolio income and total return sources.

- High, tax-advantaged monthly income and total-return potential
- Potentially lower-volatility approach
- Historically low sensitivity to traditional assets
- Convenience of one unified NAV, and one 1099 at tax time

The Challenge

Low yields across traditional income sources.

Low-interest-rate policies from central banks worldwide have kept global bond income scarce for more than a decade. U.S. Treasury yields remain near all-time lows and more than \$12 trillion of global fixed income is negative yielding.

Heightened macro uncertainties. The spread of COVID-19 has reversed global growth and driven extreme levels of market volatility. In this uncertain climate, it may be useful to expand investments into alternative, low-correlated asset classes to help navigate short-term market shocks.

High or dubious valuations. Valuations in most traditional bond markets have been pushed to new heights, while valuation multiples on stocks, particularly those not tied to real assets, are highly unreliable at present as analysts struggle for earnings clarity.

An Alternative Income Solution

An alternative income strategy can help address all three of these challenges. Income producing alternative assets (some of which are tax-advantaged) have the potential to produce higher-than-average returns compared to traditional fixed income securities, while expanding portfolio diversification to help enhance overall risk-adjusted return potential.

Five Diversifying Asset Classes, One Portfolio

Cohen & Steers takes a balanced approach in its alternative income strategy, bringing together five higher-yielding, low-correlated asset classes in one professionally managed solution. Each asset class adds historically diversifying characteristics to the portfolio, with different segments tending to outperform during various types of market climates.

- **Preferred and corporate debt securities:** high income potential from securities of largely investment-grade issuers; generally perform well across various stages of the economic cycle.
- **Global real estate securities:** provided dividend growth that has outpaced inflation; generally strong across various stages of the economic cycle
- **Global listed infrastructure:** add income and total return potential with defensive attributes; historically strong, consistent performance in most types of markets.
- **Midstream energy and master limited partnerships (MLPs):** offer high income, fee-based cash flows with monopolistic positions; tend to be strong in periods of rising energy volumes.
- **Natural resource equity securities:** add inflation-protection traits; have typically outperformed underlying commodities early cycle.

This multi-strategy portfolio brings Cohen & Steers combined specialist expertise from across the firm's listed real assets and alternative income investment teams.

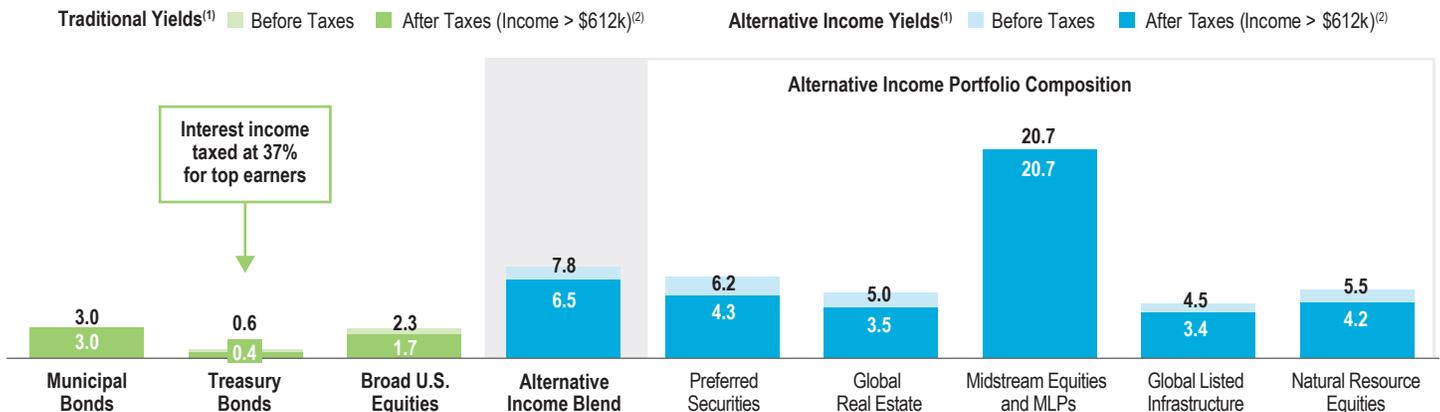

Building a Well-balanced Alternative Income Solution

Alternative Income Offers Attractive Income From Tax-Advantaged Asset Classes

Many Alternative Income Assets Provide Tax Benefits

At March 31, 2020. Source: Cohen & Steers, ICE BofA.

Data quoted represents past performance, which is no guarantee of future results. The information presented above does not reflect the performance of any fund or other account managed or serviced by Cohen & Steers, and there is no guarantee that investors will experience the type of performance reflected above. An investor cannot invest directly in an index and index performance does not reflect the deduction of any fees, expenses or taxes.

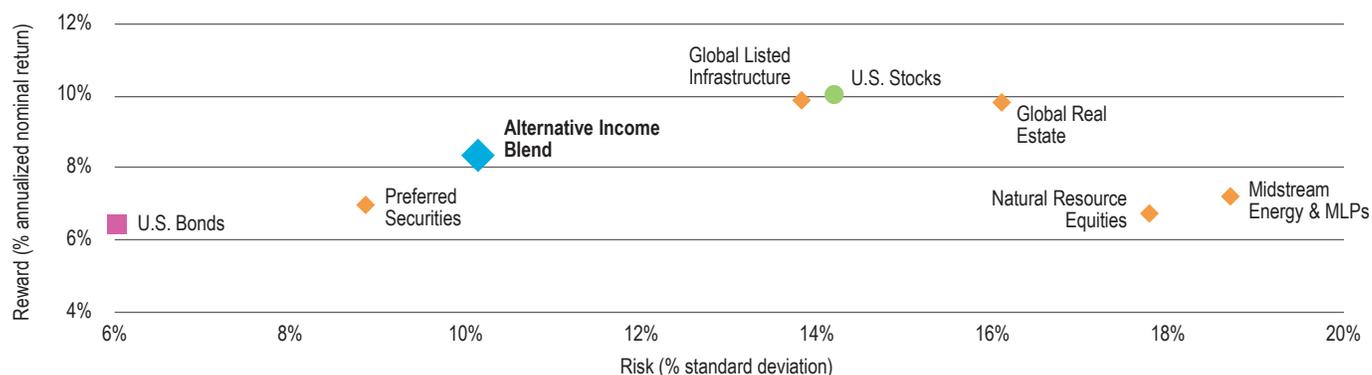

(1) Yield to maturity shown for Preferred Securities, Municipal Bonds and Treasury Bonds. Dividend yield shown for all other asset classes. (2) Assumes taxation at the highest marginal Federal income tax rates of 37% for taxable interest income, 29.6% for QBI, 20% for QDI, 20% for capital gains with an additional 3.8% Medicare surcharge on all tax rates. State and local taxes are not included in these calculations. See pages 6 and 7 for index associations and additional disclosures, including after-tax assumptions.

Portfolio Benefits

- 1. High, tax-advantaged monthly income and total-return potential.** By spreading investments across multiple sources of alternative income outside of traditional asset classes, the portfolio can pursue a steadier stream of above-average income, with opportunities for attractive levels of capital appreciation potential as well. Many of these alternative income securities tend to generate predictable cash flows due to the long-term nature of their assets. In addition, the strategy includes tax-advantaged assets, such as preferreds, MLPs and REITs, which helps investors potentially keep more of their portfolio earnings.
- 2. Lower volatility.** Because these alternative asset class exhibit low correlations to one another, combining them together in one portfolio has historically offered a better balance of risk/reward—significantly reducing overall long-term volatility while capturing attractive levels of return. This can provide a potentially smoother investment experience that helps avoid the emotion often tied to higher levels of short-term volatility, particularly for investors who may be unfamiliar with alternative investments.
- 3. Low sensitivity to traditional assets.** The strategy can also help strengthen portfolio diversification. An alternative income blend has historically exhibited a low sensitivity to both traditional stocks and bonds. This may help enhance a portfolio's overall risk-adjusted returns long term.

An Optimized Balance of Risk/Reward Exposures

Annualized Nominal Returns and Standard Deviation (1990–Q1 2020)

	U.S. Bonds (%)	U.S. Stocks (%)	Preferred Securities (%)	Global Real Estate (%)	Midstream Equities and MLPs (%)	Natural Resource Equities (%)	Global Listed Infrastructure (%)	Alternative Income Blend (%)

Alternative Income Blend represented by 45% weight to Preferred Securities, 15% weight to Global Real Estate, 15% weight to Midstream Equities and MLPs, 15% weight to Global Listed Infrastructure and 10% weight to Natural Resource Equities. (1) Standard Deviation is a measure of the dispersion of a set of data from its mean, also known as historical volatility and is used by investors as a gauge for the amount of expected volatility. (2) Sharpe Ratio is a measure of risk adjusted return, calculated by subtracting the risk free rate from a return and dividing that result by the standard deviation. The higher the Sharpe Ratio, the higher the risk adjusted return. Standard deviation is a measure for variation of price of a financial instrument over time.

Potential for Low Sensitivity to Bonds

Rolling 3 Year Beta to ICE BofAML 7-10 Year Treasury Index

Potential for Low Sensitivity to Stocks

Portfolio applications

The strategy offers a convenient way to introduce a broad range of low- to non-correlated alternative income asset classes. With no minimum initial investment (excepting a \$100,000 minimum for Class I shares), an allocation to the strategy can fit comfortably into well-diversified portfolios of any size to help meet a range of investment needs.

 <p>Add Easily introduce an alternatives allocation into a portfolio without any current exposures.</p>	 <p>Complement Help round out existing holdings for portfolios that already own alternative assets.</p>	 <p>Consolidate Streamline multiple alternative income holdings into one portfolio with one net asset value (NAV).</p>

Cohen & Steers Alternative Income Fund	
Class A	DVFAX
Class C	DVFCX
Class I	DVFIX
Class R	DVFRX
Class Z	DVFZX

Cohen & Steers Alternative Income Fund

- **Objective:** Seeks a high level of current income and, secondarily, capital appreciation.
- **Investments:** Diversified portfolio of income-producing equity, preferred, and debt securities focused on real assets and alternative income securities (target of approximately 55% equity and 45% preferred and corporate debt securities).

Highlights:

- High monthly current income, a portion of which is tax advantaged
- Complement to traditional stock and bond assets
- Potentially lower volatility approach by strategically diversifying across multiple alternative income asset classes
- Leverages the expertise of Cohen & Steers' industry-leading alternative income investment teams
- One NAV, one 1099
- Low net Class A operating expense ratio of 1.00% (gross expense ratio is 1.79%) and net Class I operating expense ratio of 0.65% (gross expense ratio is 1.51%).*

Cohen & Steers Alternative Income Fund

Performance as of 3/31/2020 (Class A Shares)

Note: Effective July 1, 2019, the investment objectives of the Fund are to seek a high level of current income and secondarily, capital appreciation. Prior to July 1, 2019 the investment objectives of the Fund were to provide long-term growth of income and capital appreciation by investing in large capitalization dividend-paying common stocks and preferred stocks.

There is no guarantee that any market forecast in this report will be realized.

During certain periods presented above, the Advisor waived fees and/or reimbursed expenses. Without this arrangement, performance would be lower.

*Cohen & Steers Capital Management, Inc., the Fund's investment advisor (the "Advisor"), has contractually agreed to waive its fee and/or reimburse expenses through June 30, 2021 so that the Fund's total annual operating expenses (excluding acquired fund fees and expenses, taxes and extraordinary expenses) do not exceed 1.00% for Class A shares and do not exceed 0.65% for Class I shares. Absent such arrangements, returns would have been lower. This contractual agreement can only be amended or terminated by agreement of the Fund's Board of Directors and the Advisor and will terminate automatically in the event of termination of the investment advisory agreement between the Advisor and the Fund.

Index Definitions. *An investor cannot invest directly in an index and index performance does not reflect the deduction of any fees, expenses or taxes.*

Alternative Income Blend: 45% Preferred Securities, 15% Global Real Estate, 15% Midstream Equities and MLPs, 15% Global Listed Infrastructure and 10% Natural Resource Equities.

Preferred Securities: Represented by 60% ICE BofA US IG Institutional Capital Securities Index, 20% ICE BofA Core Fixed Rate Securities Index, and 20% Bloomberg Barclays Developed Market USD Contingent Capital Index. Preferred Securities after-tax calculations assumes preferred securities income is taxed at the respective qualified dividend rate and marginal tax rate on a 65/35 blended basis.

Municipal Bonds: ICE BofA Municipal Master Index (Credit quality: AA-) tracks the performance of U.S. dollar-denominated investment-grade tax-exempt debt publicly issued by U.S. states and territories, and their political subdivisions, in the U.S. domestic market. Municipal Bonds' income is exempt from federal taxation.

Global Real Estate: FTSE EPRA/NAREIT Developed Index is an unmanaged market-capitalization-weighted total-return index, which consists of publicly traded equity REITs and listed property companies from developed markets and is net of dividend withholding taxes. Global Real Estate after-tax calculations assumes income is 22% QDI, 35% QBI, 8% capital gains, 11% ROC and 24% non-qualified income.

Global Listed Infrastructure: Dow Jones Global Infrastructure Index is a float-adjusted market-capitalization-weighted index that measures performance of globally domiciled companies that derive more than 70% of their cash flows from infrastructure lines of business. Global Listed Infrastructure after-tax calculations assumes income is 100% QDI.

Natural Resource Equities: S&P Global Natural Resources Index includes the largest publicly-traded companies in natural resources and commodities businesses that meet specific investability requirements and is net of dividend withholding taxes. Natural Resource Equities after-tax calculations assumes income is 100% QDI.

Midstream: The Alerian MLP Index is a capped, float-adjusted, capitalization-weighted index, whose constituents represent approximately 85% of total MLP float-adjusted market capitalization.

Midstream Equities and MLPs' after-tax calculations assumes all income is ROC.

Equities: The S&P 500 Index is an unmanaged index of 500 large-capitalization stocks that is frequently used as a general measure of U.S. stock market performance. Equities' after-tax calculations assumes income is 100% QDI. The Federal Reserve 10-Year Treasury Constant Maturity Rate is published by the Federal Reserve Board based on average yield of a range of Treasury securities, all adjusted to the equivalent of a 10-year maturity. Yields on Treasury securities at constant maturity are determined by the U.S. Treasury from the daily yield curve. Treasury Bonds are fully taxable at the federal level at the taxable interest income rate of 37%.

Risks of Investing in an Alternative Income Strategy. An alternative income strategy is subject to the risk that its asset allocations may not achieve the desired risk-return characteristic, underperform other similar investment strategies or cause an investor to lose money. In general, the risks of investing in preferred securities are similar to those of investing in bonds, including credit risk and interest-rate risk. As nearly all preferred securities have issuer call options, call risk and reinvestment risk are also important considerations. In addition, investors face equity like risks, such as deferral or omission of distributions, subordination to bonds and other more senior debt, and higher corporate governance risks with limited voting rights. Risks associated with preferred securities are different from risks inherent with other investments. In particular, in the event of bankruptcy, a company's preferred securities are senior to common stock but subordinated to all other types of corporate debt. Risks of investing in REITs are similar to those associated with direct investments in real estate securities, including (i) property values may fall due to increasing vacancies, declining rents resulting from economic, legal, tax, political or technological developments, lack of liquidity, limited diversification and sensitivity to certain economic factors such as interest rate changes and market recessions. Securities of natural resource companies may be affected by events occurring in nature, inflationary pressures and international politics. Global infrastructure securities may be subject to regulation by various governmental authorities, such as rates charged to customers, operational or other mishaps, tariffs and changes in tax laws, regulatory policies and accounting standards. Foreign securities involve special risks, including currency fluctuation and lower liquidity. An investment in MLPs involves risks that differ from a similar investment in equity securities, such as common stock, of a corporation. Holders of equity securities issued by MLPs have the rights typically afforded to limited partners in a limited partnership. As compared to common shareholders of a corporation, holders of such equity securities have more limited control and limited rights to vote on matters affecting the partnership. There are certain tax risks associated with an investment in equity MLP units. MLPs are subject to significant regulation and may be adversely affected by changes in the regulatory environment, including the risk that an MLP could lose its tax status as a partnership.

Cohen & Steers Capital Management, Inc. (Cohen & Steers) is a registered investment advisory firm that provides investment management services to corporate retirement, public and union retirement plans, endowments, foundations and mutual funds.
